

Boeing Commercial AI@ Group P.O. Box 3707 Seattle, WA 98124-2207

October 13, 1995

Dear . . .

It was a pleasure having you come to our facilities on Friday October 6, and demonstrating the E/Z Grip compound to us.

When I first received the phone call from Bob Findley, your Seattle associate, I was a little reluctant to have all our other groups involved. I took the chance, based on what Bob said, and the results have been overwhelming.

As of Tuesday, October 10, I received a verbal okay from our Boeing Material Technology Division to use the product on stripped fasteners. This was based on the MSDS and performance. That afternoon, I demonstrated the product to some senior level managers along with other developments. The response has been very positive, with comments such as "Should have had this years ago".

On Thursday, October 12, E/Z Grip was shown to the U.S. Army Reserve Center, and British Airways. Both demonstrations were so positive, that one remark was, "The price was insignificant to the cost of the maintenance task".

I have never seen any item ever get approval in Boeing for use in three working days. I have told some colleagues of mine that I have to frame the approval memo. I have thought of sending it to Frank Schrontz, our CEO. You definitely have a miracle compound.

Regards,

M. Williamson
